CPE14 – Basic Occupational Safety and Healthy

Activity 5: OSH Program

Name: GOB, Krista Lyn A. Date: November 19, 2024
Section: BSCPE III-GF Score: _____

Answer the following questions:

1. What is an OSH Program?

Occupational Safety and Health (OSH) encompasses all aspects of workplace health and safety, with a strong emphasis on preventing hazards before they occur. Its primary aim is to safeguard workers from accidents and harm arising from work-related activities. Studies have demonstrated that ensuring workplace safety and well-being contributes to business success and profitability. Employers hold the primary responsibility for maintaining the occupational safety and health of their employees. This includes conducting risk assessments and prioritizing safety in business operations. Governments, on their part, create regulatory frameworks that allow employers to implement flexible strategies to manage workplace safety. Strong OSH performance is crucial for managing a company's reputation, especially when it relies on maintaining relationships with a global consumer base.

2. Make an OSH Program for every type of establishment. (at least two(2))

- **Construction Site OSH Program**

Fall Protection Plan: Implement fall arrest systems, guardrails, and provide safety harnesses for work at heights.

Personal Protective Equipment (PPE): Supply workers with hard hats, gloves, safety glasses, boots, and other relevant PPE.

Hazard Communication and Training: Provide training for workers on potential site hazards, how to avoid them, and ensure compliance with safety regulations.

Site Safety Inspections: Conduct regular safety inspections to identify and correct hazards like exposed wires, unstable scaffolding, or poor lighting.

Emergency Preparedness: Have first-aid kits on-site, train workers on emergency response, and maintain a clear evacuation plan.

- **Laboratory Facility**

Chemical Safety Program: Proper labeling, storage, and handling of hazardous materials.

Ventilation and Fume Hoods: Ensure all experiments involving hazardous chemicals occur under fume hoods.

Emergency Shower and Eye Wash Stations: Availability of functional safety stations.

PPE Usage: Lab coats, gloves, goggles, and face shields when necessary.

Waste Disposal: Follow procedures for the safe disposal of hazardous waste.

3. Sample form on each.

Construction Site OSH Program

Company Overview:

JKL Construction employs 150 workers, operating multiple construction projects with high-risk tasks, including work at heights, heavy machinery operation, and material handling.

1. OSH Policy Statement

"JKL Construction is dedicated to the highest standards of health and safety for our workers and contractors. We are committed to a proactive approach to hazard identification and risk mitigation across all sites."

Signed by:

[Name], Project Manager of JKL Construction

2. Responsibilities

- Management: Provide resources for training, safety equipment, and risk management.
- Ensure compliance with construction safety laws.
- Supervisors: Enforce safety measures and conduct regular safety briefings.
- Workers: Adhere to safety rules, use PPE, and report hazards.

3. Risk Assessment and Hazard Mitigation

- Daily Toolbox Talks: Identify site-specific hazards each day.
- Common Hazards Identified:
- Falls: Use of fall arrest systems, guardrails, and harnesses.
- Heavy Machinery: Proper training, maintenance checks, and spotter use.

4. Training Program

- Induction Training: Site-specific training for new workers.
- Weekly Safety Meetings: Regular updates on hazards and best practices.
- Certification Training: Machine operation, working at heights, etc.

5. Emergency Procedures

- First Aid: On-site first aid trained staff.
- Evacuation Plans: Site-specific evacuation routes and muster points.

6. PPE Requirements

- Mandatory PPE: Hard hats, gloves, safety glasses, steel-toe boots.
- Inspections: Daily checks for PPE condition.

7. Incident Reporting and Investigation

- Immediate Reporting: All incidents must be reported immediately.
- Investigation: Conducted by a safety officer to determine root causes.

8. Site Safety Inspections

- Daily Walkthroughs: Supervisors conduct checks each shift.
- Monthly Audits: Comprehensive review of site conditions and safety.

9. Wellness Initiatives

- Fatigue Management: Limit overtime and provide rest breaks.
- Counseling Services: Mental health support for workers.

10. Documentation and Compliance

- Record Keeping: Maintain safety logs, training records, and incident reports.
- Compliance Audits: Regular checks to ensure legal adherence.

By implementing these OSH measures, JKL Laboratory Facility demonstrates its dedication to protecting its staff, maintaining a safe working environment, and complying with all applicable safety regulations, thereby minimizing risk and fostering a strong culture of safety.

Laboratory Facility OSH Program

Company Overview:

JKL Laboratory Facility specializes in chemical, biological, and analytical research and employs 100 staff, including researchers, lab technicians, and administrative personnel. The facility handles hazardous chemicals, biological agents, and advanced laboratory equipment.

1. OSH Policy Statement

“At JKL Laboratory, we are committed to ensuring the health and safety of all employees, contractors, and visitors by adhering to the highest standards of laboratory safety and regulatory compliance. We strive to identify and mitigate risks to create a safe working environment for all.”

Signed by:

[Name], Director of JKL Laboratory

2. Responsibilities

- Management: Ensure compliance with safety regulations, allocate resources for safety programs, and review OSH performance.
  Conduct regular safety audits and ensure staff are trained and informed about safety protocols.
- Supervisors and Lab Managers: Implement and enforce safety policies in laboratories, monitor adherence, and conduct regular safety briefings.
- Employees: Follow all safety protocols, wear required PPE, and report hazards or incidents promptly.
- Safety Committee: Review incidents, recommend improvements, and oversee compliance efforts.

3. Risk Assessment and Hazard Mitigation

- Quarterly Risk Assessments: Conducted to identify risks related to chemical, biological, physical, and ergonomic hazards.

Common Hazards Identified:

- Chemical Hazards: Proper labeling and storage of chemicals, use of fume hoods, and adherence to Material Safety Data Sheets (MSDS).
- Biological Hazards: Safe handling, storage, and disposal of biological agents, including biosafety level containment protocols.
- Physical Hazards: Electrical safety, proper handling of equipment, and ergonomic considerations.

4. Training Program

- New Employee Orientation: Training on OSH policies, emergency procedures, chemical hygiene, and the correct use of PPE.
- Annual Safety Training: Includes updates on laboratory safety, chemical handling, biological safety, and emergency response procedures.
- Job-Specific Training: Tailored training for tasks involving hazardous materials, specialized equipment, and unique laboratory processes.

5. Emergency Procedures

- Fire Safety: Fire extinguishers and alarms are readily available and regularly tested. Bi-annual fire drills for all staff.
- Chemical Spill Response: Training for spill containment and cleanup. Spill kits located in each lab.
- Biological Exposure Response: Immediate containment and notification procedures for exposure incidents.

6. PPE Requirements

- Mandatory PPE: Safety goggles, lab coats, gloves, and other task-specific PPE (e.g., face shields for splash protection).
- PPE Training and Inspection: Staff training on the correct use and care of PPE; regular inspections to ensure PPE compliance.

7. Chemical and Biological Safety Protocols

- Chemical Management:
  Inventory system for tracking chemicals, proper labeling, and secure storage cabinets.
  Use of fume hoods for volatile substances.
- Biological Safety Measures:
  Biosafety cabinets for handling infectious agents.
  Autoclaves for sterilization and proper disposal of biohazardous waste.

8. Incident Reporting and Investigation

- Reporting System: All incidents, near-misses, and exposures must be reported within 24 hours.
- Investigation and Root Cause Analysis: Incidents investigated by a safety officer with corrective actions identified and implemented to prevent recurrence.

9. Inspections and Audits

- Weekly Laboratory Inspections: Ensure compliance with safety protocols, equipment maintenance, and cleanliness.
- Annual Safety Audit: Comprehensive review of the OSH program, incident records, and regulatory compliance.

10. Ergonomics and Employee Well-being

- Ergonomic Assessments: Workstations and lab benches evaluated for optimal ergonomic setup.
- Health and Wellness Programs: Stress management resources, mental health support, and access to counseling.

11. Compliance and Documentation

- Record Keeping: Maintain training logs, risk assessments, incident reports, and audit results for at least five years.
- Regulatory Compliance: Adherence to all relevant local, national, and international laboratory safety regulations (e.g., OSHA, CDC guidelines, etc.).

12. Waste Management and Disposal

- Hazardous Waste Disposal: Proper segregation, labeling, and disposal of chemical and biological waste in accordance with regulatory standards.
- Regular Waste Audits: Ensure compliance with disposal protocols and minimize risk of contamination or exposure.

13. Safety Culture Promotion

- Regular Safety Meetings: Ongoing discussions about safety improvements, new hazards, and compliance updates.
- Suggestion Program: Encourage employees to provide feedback and suggestions to enhance safety measures.

By implementing these OSH measures, JKL Laboratory Facility demonstrates its dedication to protecting its staff, maintaining a safe working environment, and complying with all applicable safety regulations, thereby minimizing risk and fostering a strong culture of safety.
